

Matter 13 Climate Change.

Policy CC3

I note with interest figure 11.1 and the blue dots located in Dunnington and contrast this map with the actuality of LP site H31 (20/01626/FUL) approved by CYC to be connected up to the gas network for individual boiler connections.

Policy CC1

Specifically para. (i)

Currently in a very visible location on Green Belt land previously identified as preventing coalescence between Osbaldwick and Murton is a BESS installation under construction (18/02659/OUT & 22/01227/FUL) and a recently submitted scoping opinion for another (22/00137/EIASN).

The safety implications of these installations, allied to the proposed closure of one of York's fire stations has not been considered.

The Green Belt implications of a host of these applications being approved on this section of land will not escape the interest of the Inspectors.
